Jai Navani

D15A 31

Procedure:-

1. Create an S3 bucket of the same location as that of the Lambda function

Upload objects - S3 bucket jaikunallambdabucket

us-east-1.console.aws.amazon.com/s3/upload/jaikunallambdabucket?region=us-east-1&bucketType=general

aws Services Search [Alt+S] N. Virginia voclabs/user3402861=NAVANI_JAI_DEEPAK_HARSHIKA @ 4823-2232-4237

Upload succeeded

2. After creating the Lambda function copy a code available on the internet which allows the Lambda function to access the S3 bucket contents.

The screenshot shows the AWS Lambda console editor for a function named "TTT Lambda Function". The code is written in Python and is designed to retrieve an object from an S3 bucket based on an event. The code includes imports for json, urllib.parse, and boto3. It initializes an S3 client and defines a lambda_handler function. The handler extracts the bucket name and object key from the event, then uses the S3 client to get the object's content type and returns it. Error handling is included for cases where the object is not found or the region is incorrect.

```
import json
import urllib.parse
import boto3

print('Loading function')

s3 = boto3.client('s3')

def lambda_handler(event, context):
    #print("Received event: " + json.dumps(event, indent=2))

    # Get the object from the event and show its content type
    bucket = event['Records'][0]['s3']['bucket']['name']
    key = urllib.parse.unquote_plus(event['Records'][0]['s3']['object']['key'], encoding='utf-8')

    try:
        response = s3.get_object(Bucket=bucket, Key=key)
        print("CONTENT TYPE: " + response['ContentType'])
        return response['ContentType']
    except Exception as e:
        print(e)
        print('Error getting object {} from bucket {}. Make sure they exist and your bucket is in the same region as this function.'.format(key, bucket))
        raise e
```

3. Add a trigger to the Lambda function so any changes in the S3 bucket will be first visible to the user.

Add trigger

Trigger configuration Info

S3

aws asynchronous storage

Bucket

Choose or enter the ARN of an S3 bucket that serves as the event source. The bucket must be in the same region as the function.

s3/sanketbucket123

X

↺

Bucket region: eu-north-1

Event types

Select the events that you want to have trigger the Lambda function. You can optionally set up a prefix or suffix for an event. However, for each bucket, individual events cannot have multiple configurations with overlapping prefixes or suffixes that could match the same object key.

All object create events X

Prefix - optional

Enter a single optional prefix to limit the notifications to objects with keys that start with matching characters. Any special characters must be URL encoded.

e.g. images/

Recursive invocation

If your function writes objects to an S3 bucket, ensure that you are using different S3 buckets for input and output. Writing to the same bucket increases the risk of creating a recursive invocation, which can result in increased Lambda usage and increased costs. [Learn more](#)

☒ I acknowledge that using the same S3 bucket for both input and output is not recommended and that this configuration can cause recursive invocations, increased Lambda usage, and increased costs.

Lambda will add the necessary permissions for AWS S3 to invoke your Lambda function from this trigger. [Learn more](#) about the Lambda permissions model.

Cancel

Add

4. In the event notification of the S3 bucket we can see that it has been connected to the Lambda function .

No data events to display.

Configure in CloudTrail

Event notifications (1)

Send a notification when specific events occur in your bucket. [Learn more](#)

EditDeleteCreate event notification

<input type="checkbox"/>	Name	Event types	Filters	Destination type	Destination
<input type="checkbox"/>	905f180d-6a25-4474-941b-66671d74e4cd	All object create events	-	Lambda function	sanketlambda123

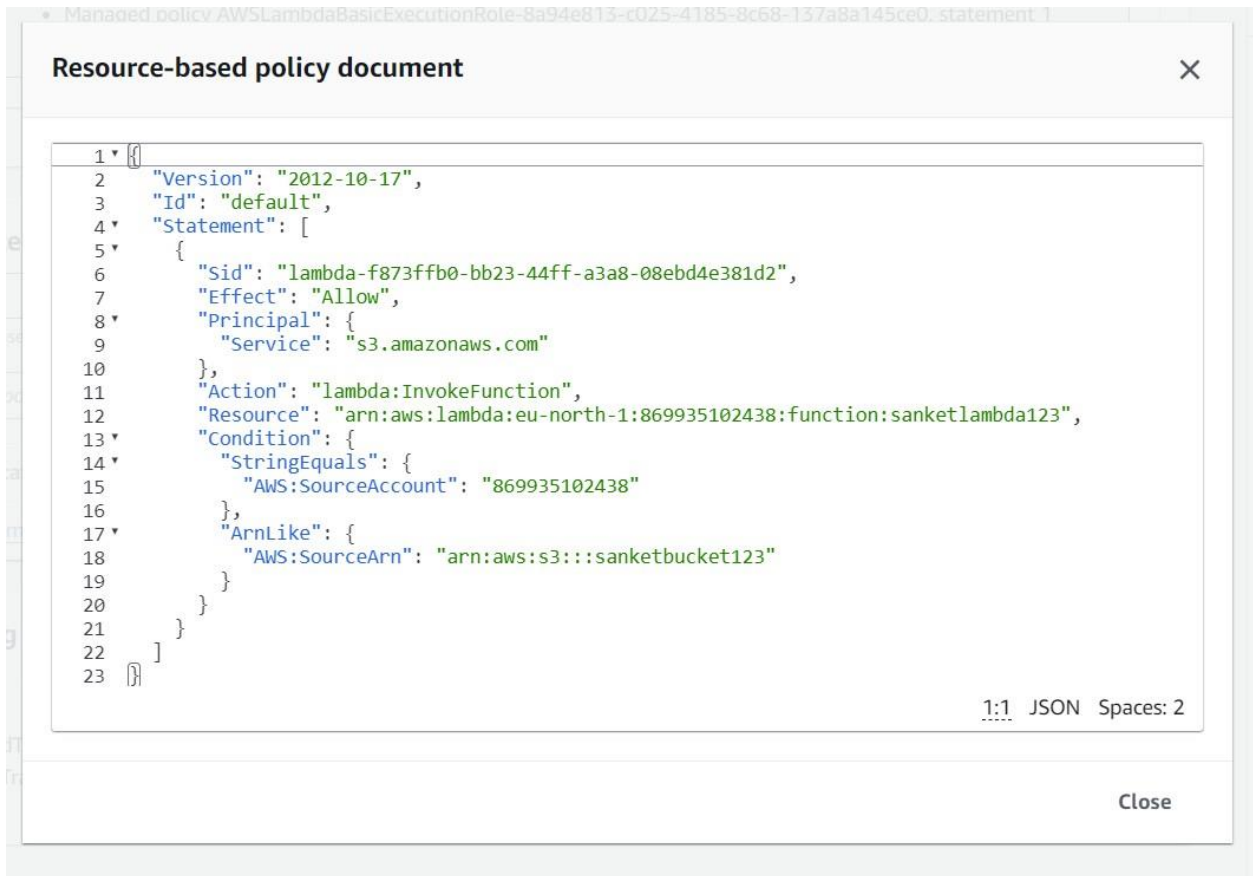

Amazon EventBridge

For additional capabilities, use Amazon EventBridge to build event-driven applications at scale using S3 event notifications. [Learn more](#) or [see EventBridge pricing](#)

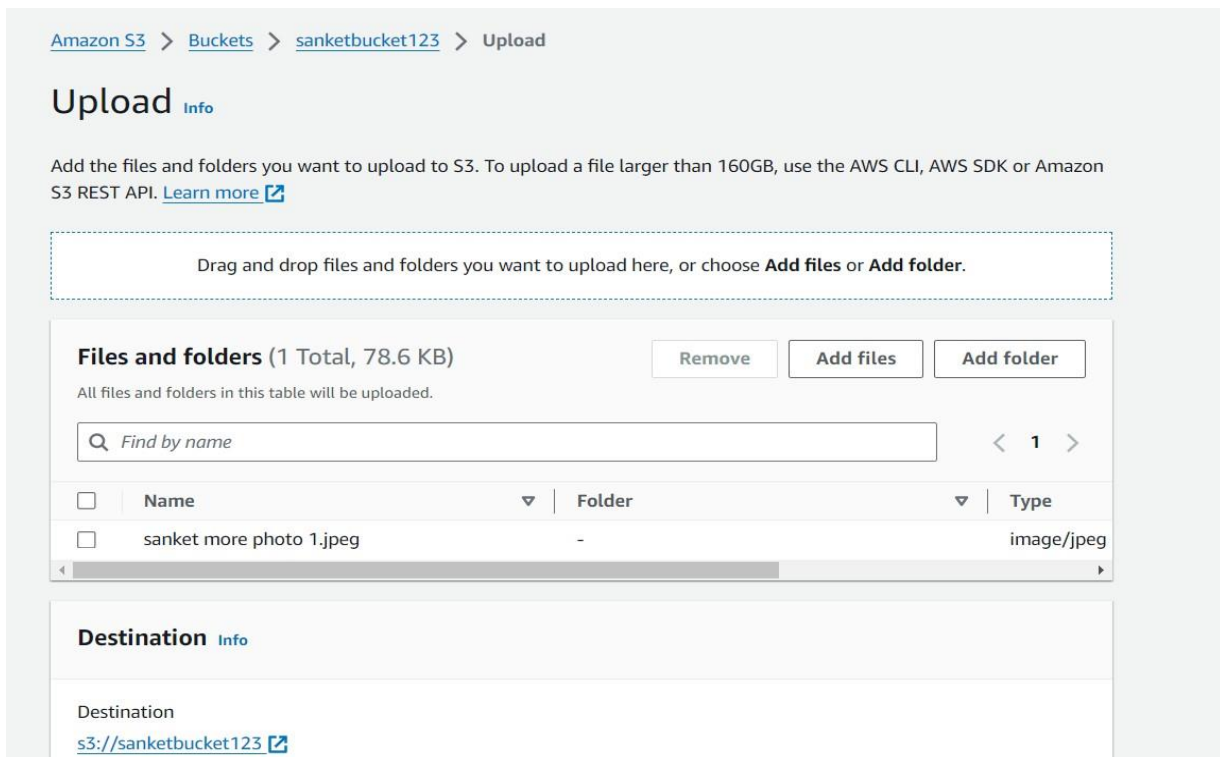

Edit

Send notifications to Amazon EventBridge for all events in this bucket

Off

5. Upload a photo to the S3 bucket

6. Now run the function and in the cloud watch logs of AWS you can see the message printed and all the other details of the working of the Lambda function.

us-east-1.console.aws.amazon.com/lambda/home?region=us-east-1#/functions/lambdaJaikunal?tab=configure
